Website Traffic Services

Website traffic services software and tools

I have tried some of the website traffic services to get some fast traffic to my website and make money with my website. Those website traffic services not only did not help me any money not even with Google adsense but also did not even increase my Alexa ranking. That simply mean those website traffic services do not worth using and spending any money at.

Now to be honest, not all website traffic services are alike, some are 100% worthless but others can deliver a cheap targeted traffic that at least increase your Alexa ranking and force the search engines to notice your website.

Here I want to review some of the traffic services that brought me some results, but after the short review I will show you exactly how build your own website traffic channel and start getting high value targeted traffic from the search engine with minimum investment.

Website traffic services review.

Absolute worthless website traffic services like boostmyvisitors, Ineedhits, and all traffic exchange programs are waste of time and money and will not have any effect on your website rankings or make you any benefits.

[Revisitors](#) is an average website traffic generation service, I give it a **5/10 score** but only for its Alexa

traffic packages. This service uses cheap marketing strategies in masses to generate hits to their network of websites, then they redirect some of their hits to their customers and use email marketing to generate revisits to their customer's websites.

[Getwebsitetraffic](#) is also a cheap with average results website traffic service that use expired domain names and directory listing to redirect traffic to their customers website. Their targeted traffic package is a good value but only for limited niches, their traffic really made change on one of my blogs and brought me good subscribers and helped me build a good mailing list. It's good website traffic service if you can have an attractive landing page. I give it a **7/10 score**

In general I have tried more website traffic services but I will not recommend any, not even those that I still use like the 2 I have reviewed. If you are short in money you can invest in other effective ways to generate traffic to

your website. Strategies that you have more control on and know where the traffic comes from.

For that I want to share with you some website traffic software that you can start using.

Website traffic software

Let's start by showing the cheap software that could help you start with low investment and getting good results.

[The traffic Brain](#) is not a software that you need to download, it a web based software that need no work at all, just submit your link and link details and choose where to submit the link. It will automatically submit your links to powerful traffic sources and generate only dofollow backlinks and generate fast targeted traffic to your pages. **I really recommend** this program because it requires almost no work and time and generate great fast results.

[Sick Submitter](#). Sick submitter is a great cheap software that can help you automate some of your marketing strategies by automatically submit your links and content to traffic sources. It helps you build channels of traffic from different sources like social media, social bookmarking, article directories, and press release sites.

It have a free trail version you can download and start using to see exactly how it works before investing on it even when it's a very cheap software that I recommend start by a paid version because it will make your first setup very effective, fast and easy. It only cost \$19.9 per month and does the same work as \$197/month software I know.

[Magic Submitter](#), the same principle as the above software, it helps you automatically submit your links and content to social media site all kind even video marketing sites. It's more powerful than the Sick Submitter, easier to use and work with and can generate instant traffic.

[SEO EVO II](#), the most powerful traffic and SEO software online today. You may have heard of several SEO software like SEnuke, Xrumer and others. But EVO II is more powerful than other software, easier to use without any extra charges like proxies. This software builds thousands of links to your pages, blog posts and any other Linkwheel pages you have by submitting related content all over the web. It highly increases your Alexa ranking and search engine ranking in short period of time.

The [EVO II](#) software is being used by top internet marketers for more than a year with great results and impressive reviews. It's not widely discussed on the internet marketing because it play on the fine line between black hat and white hat search engine optimization and most users do not want it to get more popular and do not want the search engines to detect the users of this software. This software is always going through huge updates by a professional SEO company and experts. **We strongly recommend being very careful using this software.**

The difference between website traffic services and software is simple to detect, with traffic services you pay a monthly fee to get some fast traffic, when you stop paying the traffic will stop, and you will be back to the starting point exactly if you have done nothing.

With the website traffic software, you are building channels of traffic to different pages on your blog and website, and even if you stop using the software the work that you have done so far will keep bringing you traffic and results. If used wisely the software could put a blog post from your blog in the search engine first page and could generate good amount of traffic from the organic search engine results page.

In my next post I will show you how to build strong channels of website traffic from search engines with only using [Unique Article Wizard](#) and blogging.

You can also find this article published on [Website Traffic Services](#), and on the tag pages [Cheap Targeted Traffic](#), [Domain Names](#), [Exchange Programs](#), [Google](#), [Ineedhits](#), [Investment Website](#), [Marketing Strategies](#), [Minimum Investment](#), [Niches](#), [Search Engines](#), [Services Software](#), [Time And Money](#), [Traffic Channel](#), [Traffic Exchange](#), [Traffic Generation Service](#), [Traffic Package](#), [Traffic Packages](#), [Traffic Service](#), [Traffic Services](#), [Website Traffic Generation](#).
