Blog Traffic, Best Way To Increase Blog Traffic And Blog Earnings

So you have a blog online and want to increase blog traffic and start earning from your blog. Blogs are the best money making because they are the easiest to promote and generate high amount of traffic to.

We all know the even social media sites and video sharing sites get more traffic than any other sites online, it does not mean in any way that those sites are better traffic sources than Google or even Yahoo. However those sites can be very helpful to increase the traffic you get from Google. So let's agree on one fact that the best blog traffic source is Google and mainly the organic search results on Google.

Here I will share with you some very important tips to increase your blog traffic from Google:

1. Do not ever use any duplicate content on your blog. If you are writing and spinning articles and distributing those articles across the internet to generate backlinks and traffic to any page; do not use any version of those articles in your blog. Only use 100% unique articles on your blog –It's very very important-.
2. Always use a good search term (keyword phrase) as your title, you need to attract traffic from Google, and your title will tell Google for what search term to rank your post. Your post is a separate page that could be indexed and ranked high by itself, so treat each post as a separate page with good optimized title and content.
3. After publishing your post make sure to bookmark it, at least using Facebook and Twitter. Social media sites like those 2 are a great viral marketing sources; and Google detect any new change from those 2 sites. So when you submit your new post to them Google will index your post faster and give it the beginning ranking. It will be great if you can ask your reader to also share your link with those 2. So be sure to have a like and tweet buttons on each blog post.
4. Use other bookmarking services to start generating some links and love to your blog posts. You can use Ping.fm and Su.pr that will start generating some fast hits to your post. But also it's a good idea to have any service or tools to generate some mass bookmarking to your post. We need to start building some backlinks to the post itself and get the post to rank higher on the search engines. For example you can use The Traffic Brain service to get up to 640 links from classified ad sites, 400 social media publishing's and 100 bookmarks.
5. Now comes the best part and the most important. To get the post to rank very high on the search engines with our keyword that is in the title, and we have optimized our post for. We need to build some high quality backlinks to the post using the exact keyword as the anchor text. And you all know that the best way to do so is through [article marketing](#). And here will use [Unique Article Wizard](#).

Write a short related but very different than the post article, and spin this article to make 3 different versions of this article then submit the 3 versions with [Unique article wizard](#).

Make sure to link to your post from the resource box, and submit maximum 100 articles per day.

[Unique article Wizard](#) is by far the best most effective article marketing service online that will post your unique articles to thousands of article directories and blogs, and because it posts your articles to related blogs it will give your backlinks more value and will generate traffic from those blogs to your post.

Again the idea is very simple, start by building a list of keywords that are related to your main blog keywords. Find some long tail phrases that have low competition on Google. Then whenever you have time write a new blog post about one keyword from your list, then promote your blog post using UAW.

If you use this strategy I can guarantee you that first of all you will increase your blog ranking, deep linking is a very important element on increasing your main blog ranking, and will start generating high volume of traffic to your blog.

This blog traffic strategy is very effective that could make you earn a lot of money from your blog, and only from Google AdSense you can cover the cost of UAW and even earn a lot more

I know some internet marketers using the same strategy, but instead of UAW they use faster software that allows them to generate more backlinks like [SEO EVO II](#) or [SEnuke](#). But because it cost more and honestly not everyone knows how to use those software safely I don't recommend those software, even when I myself use those 2 software.

Authors! Submit a **Different Unique Version** of your Articles to each of **HUNDREDS of Directories** [Click for Details](#)
