Rank Builder Honest Review

Let me start by clearing one thing out

I hate this program and do not recommend it by any way.

Now let's start the rank builder review

To be honest we are running an SEO company and main business is to provide good quality of back links to our customers, and like any other business our main interest is customers satisfaction, without it we will be out of business very fast even when we are under the radar business.

So we always look for new software and services to help us get good results as fast as possible, you know today's SEO business need to be not only efficient but also fast. So we need to provide some high quality and quantity of back links and fast.

Now I do not care what other webmasters think about SEO and automatic link building software and services. Their mistakes may affect only their own websites, but mine will destroy my business. So all SEO companies out there are using such software and services to build mass quantity of back links, because getting high quality back links in short period of time is not possible any more.

Now to the point, what about rank builder.

When we heard about rank builder software, we thought to try it, and it was a disaster, honestly. I am really in shock by webmasters who invest a lot of money and work on creating good sales page and member area with training, videos and other stuff, but did not get 100% sure the software works with all operating systems, and have a lot of problems and bugs.

So first of all rank builder software will not work with any windows operating system other than windows 7. You can install it but it will require serious changes and configuration on your system and not everyone knows how to do that.

They do not explain this in their sales page.

If you are using vista for example the software will make a lot of damage to your system, and sometimes it could cause a total crash.

Secondly this software requires a lot of work from your side, and it use your internet explorer to surf and submit the content, so it's not independent software. The work you need to invest on running the software first time is huge and I know not all of us could go through that kind of work and time.

Third you need to have a US proxy, and if you don't have yet so you need to know that it will cost you an addition cost.

After installing and running the software will create accounts for you, as any other software, but this one requires you to manually verify your accounts and in most cases your password to the websites need to be manually updated.

The last thing is the cost of this software, it cost a \$67/month while other software that is better than this one like [Article Marketing Robot](#) (that almost do the same work but with more websites) cost a one payment of \$97. If you are going to invest a monthly investment to build back links it better to be web based service like [UAW](#) or [LINK Emperor](#), Or even software with good data base and updates.

Again I have nothing against those guys except they need to invest in their software before selling it and be sure it works fine and they need to be honest with people and explain everything to them before selling them. If your products have special requirements you need to explain those requirements on the sales page not after the

selling.

So my summary is not buying this software it does not worth the headache of installing and running.

They have a 7 days trail for \$5 but you will not be able to finish the installation and the first run in 7 days.

Maybe there are some things we did not know, but it's also their problem because they need to be clear on everythings.
