# **Make Money With Your Niche Website**

Make money from the internet by having your own website, niche websites are very easy to build, publish, and make them rank high with the search engines.

It's almost exactly as we make on the squidoo pages but here we are using our own URL instead of public one. Some people will get very scared when it comes to having their own websites. But the truth is it's very very easy to have your own website online very fast.

When we talk about having a website, most start to think about hosting, HTML, flash, design, ftp, fonts, forms, banners, scripts, codes and unlimited features. While in reality website could mean only writing an article and cut and paste procedure.

I use the [Profit Matic website builder](#); with them I have all the website features and everything I need to launch a website in just seconds.

Most successful internet and affiliate marketers use an advanced and automated website builder tool such as [ProfitMatic](#) and launch what they call "mini sites" to make money on the internet.

The first mistake affiliates make when they try to build a money making business on the internet is spending all their time building and designing their websites, and after doing so they spend more time on uploading and fixing errors than they use some website submission (useless) service and wait for the money to come. And the money will never come.

You don't need to spend any time on building your website, you need an advanced tool, so you can write your reviews and publish your pages online in a matter of maximum one hour then you need to spend some time in promoting your pages using article marketing, Pay per click and any other marketing strategy you find possible. The money comes from marketing your pages not from building them. Some affiliates have an ugly websites (like mien) but they still make some good money out of it.

[Profit matic](#) was developed by two of the most successful internet marketers online, and its main functionality is to help other internet marketers to easily build and launch money making websites. However you can find that ProfitMatic is highly marketed as a

money making opportunity, because most of ProfitMatic users love it and what it can do for your online business and they also love the money they make by promoting it. But ProfitMatic is much more than money making opportunity.

Here is one of our websites that we build using ProfitMatic:

[Niche Affiliate Marketing](#), you can see that this website is a very simple design but it generate a good income for us.

To make money with your website or WebPages you need to first choose the subject you want to write about, it will be your niche; then you need to [choose a proper domain name](#) that includes at least one main keyword (it could be general), me personally love short domain or descriptive domains, this way people can remember my domain. Then you write your information about that subject.

In your main page (index page) you can be very general but you need to give your visitors a good idea about you and your knowledge. In your other pages you can be more specific and targeted to give specific information about the subject. Try to divide your subject to categories and build deferent pages to explain each category.

Niche sites does not mean in any way small sites, you can have a thousand page website and each page talk about deferent area of your niche.

For SEO purposes you need to research your keywords and title each deferent page with one of your keywords.

Here is more information about [building a niche business](#), and [search engines optimization](#).

Look at it this way: We have discussed Pay Per Click advertising and it's a money making strategy, I know an affiliate who makes each year more than one million dollars only from Pay per click advertising, but in the other hand he spent more than half million on the click costs. It is still profitable, but for some beginners it will be a heavy investment to spend so much money on the pay per click, and most of beginners don't have the money for that strategy. And if you can have your own website, and then instead of choosing keywords to bid on with PPC you choose those keywords to build pages, new pages on your website.

It is enough to have that keyword on the title tag, in the header paragraph, in the main article and in the footer paragraph, in your page URL as <http://yourdomain/keyword>, then build some links from other websites directly to that page (article marketing and social sites marketing are the best for good back links). And you can have your pages in the first Google search page for that keyword without biding on it. And it could make you great money without spending any.

You can also find this article published on [Make Money With Your Niche Website](#), and on the tag pages [Affiliate Marketers](#), [Article Marketing](#), [Builder Tool](#), [Cut And Paste](#), [First Mistake](#), [Flash Design](#), [Functionality](#), [Marketing Strategy](#), [Money Marketing](#), [Niche Websites](#), [Paste Procedure](#), [Pay Per Click](#), [Profit Matic](#), [Profitmatic](#), [Reality Website](#), [Search Engines](#), [Successful Internet Marketers](#), [Ugly Websites](#), [Website Features](#), [Website Submission](#).
