Forex Trading Online Easy Forex

Today I mad 270\$ in [easy forex](#) trading, IT was 100% luck. It's the highest earning I made in one deal for a long time, my day ended with about 350\$ in profit. And if you are wandering yesterday I lost \$120 and the day before I earned \$96.

You can say I am addicted to the forex trading but, I also end up making some money. It has nothing to do with experience, knowledge or any tools. I use the simple platform of [easy forex](#) and one diagram that show all the changes in deferent time range (hourly, daily and weekly).

You can say it's a 50-50 percent chance, but sometimes you can be sure about the direction of the diagram. For example when the rate reaches the lowest level (for a week or month) you can be sure that it will level for a short period then climb up again.

Why is that?

When the euro for example drop down to his lowest level in the week, more and more investors will buy Euros, and the more amount bought the more value will it gives the Euro, and it will climb up. That's a fact unless there is some external factor that could affect the value of the euro or the other currency you are exchanging with.

That's OK to look at it buy one currency, but the better picture is when you see the couple of currencies together.

And by the way I recommend focusing on only a couple of currencies only, this way you will get more experience with the changes and what affect it.

Does this post recommend trading with forex?

Yes it is, if you have a \$200 spare (at least) open an account with easy forex, choose your favorite currency couple, give it a couple days to monitor the changes. For the best monitoring process use the trading platform MetaTrader 4 go to [LiteForex](#) and download it from there. You can use [LiteForex](#) as a trading broker but I personally work directly from the easy-forex. I use the MetaTrader 4 only because they have great diagrams.

Some forex traders use automated forex robots to make the trading automated, this robots are recommended only if you don't have much time to spend on monitoring the changes, sometimes it takes hours to have a small change. The one we know, used and can recommend is [FapTurbo](#), it is software that runs on your computers and connects to your forex account, and makes the trading for you.

Other services can help is the signals, They know nothing and give you nothing (waste of money).

Here is a short report that may help you understand some features.
